

Proudly Presents

TOSS OR TURN?®

Don't just TOSS it...
...but TURN it into NEW!

GFL Environmental is committed to educating students about recycling and is continuing to offer an educational program for schools in Macomb, Oakland, Livingston, Washtenaw and Wayne Counties.

- Age appropriate presentations for Pre - Kindergarten through 12th grade.
- Fulfills one of the requirements towards becoming a “Michigan Green School”.
- Presentation is free!

Presentations:

1. For Preschool and Kindergarten (3 to 5 years of age) – my focus is on just recycling. I talk about how you recycle with some help from [Caillou Learns to Recycle](#). I read them the story and we review some of the key concepts afterwards and then discuss what at home you can place in the recycling bin. (30 minutes).
2. For 1st through 2nd grade (6 to 7 years of age) my focus is on the 3 R's and what you can put in the recycling bin. I combine a story about recycling with my Prezi presentation. I start out discussing recycling and then we discuss how we can reduce waste, how we can be our own inventors and “reuse” materials, and finally a review on recycling and what to place in the recycling bin. (Approximately 45 minutes).
3. For grades 3rd – 5th (8 to 10 years of age) we also discuss the 3 R's, but we go into more detail on where the recycling goes and on the materials that are recycled. For example I go into more detail explaining the loop, the various grades of paper and classifications of plastic that can be recycled. (45 minutes).
4. The 6th – 12th grade (age 11 and up) presentation reviews the 3 R's with more detail placed on explaining what can be recycled from a home/school standpoint, where it goes and the benefits to recycling. (45 minutes).

I am now scheduling for the 2017 – 2018 school year, if you would like to reserve a date now and confirm when the school calendars are approved I can accommodate your requests.

Thank you,

Victoria Czapski
